SAMPLE MULTI-PAGE PARTNERSHIP DOCUMENT

1. PURPOSE

This sample multi-page document exists to test page navigation and per-page signature placement in the YPEF Partner Document Signing Tool. It has no legal meaning.

Use this file to confirm that: the page selector correctly switches the rendered preview, the click-to-place coordinates are page-specific (a placement made on page 1 should not leak onto page 2 or 3), and the final signed PDF only carries the signature image on the chosen page.

SAMPLE MULTI-PAGE PARTNERSHIP DOCUMENT

2. OPERATIONAL TERMS

This page intentionally contains different content from page 1 so that a tester can visually confirm which page received the signature overlay in the downloaded PDF.

Sample clause: partners agree to review portfolio decisions on a quarterly basis and to maintain the audit trail required under the YPEF signing process for every document signed on their behalf.

3. SIGNATURE PAGE

This is the signature page. In a real workflow, the operator would typically select this page and place the partner's signature near the signature line below.

This sample document was generated automatically for QA / demo purposes and should never be treated as a binding record.
